

GRAPHICAL ABSTRACT

Retrospective Studies: An Insight into the Histopathological Findings Associated with Breast Cancer

AUTHORS

Eshaa M, Ayesha S, Nageen H

BACKGROUND

- Most prevalent cancer among women
- Delayed diagnosis, poor awareness

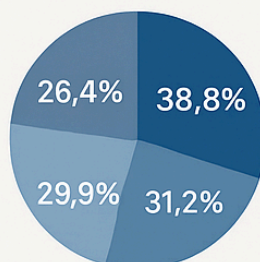

OBJECTIVE

Investigate histopathological features of breast cancer

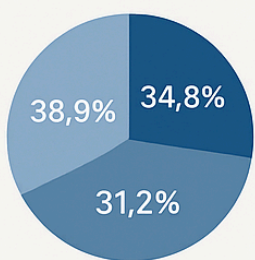

METHOD

- Retrospective design
- 174 Pakistani women (2021-2023)

Tumor grade

Tumor size

Left side
38,9%

59,5%
Lymph node
status

CONCLUSION

- Intermediate-grade tumors common
- Suboptimal awareness of breast cancer
