

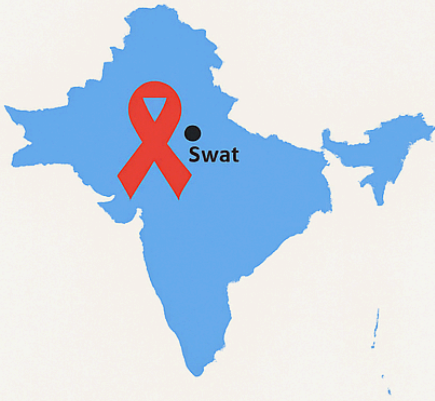

GRAPHICAL ABSTRACT

Epidemiology of High-Risk Behaviors Associated with HIV and Their Impact on Sexual Health

AUTHORS

Younus MI, Ullah I, Khan F, Tariq Z, Tariq H, Raza S

BACKGROUND

HIV remains a significant public health challenge in regions of South Asia

OBJECTIVE

Assess HIV-related high-risk behaviours in Swat

METHOD

Cross-sectional study, n = 80
Face-to-face interviews

RESULTS

- 20% unprotected sex
- 17.5% sex without condom
- 12.5% multiple sexual partners
- Higher risk: low education, early marriage

CONCLUSION

Targeted, culturally sensitive interventions are needed to reduce HIV transmission
