### BACKGROUND

Postpartum hemorrhage is a leading cause of maternal morbidity.

### OBJECTIVE

To compare outcomes among in-patients and referred cases with postpartum hemorrhage

### METHOD

Cross-sectional study involving 137 women with primary postpartum hemorrhage

### RESULTS

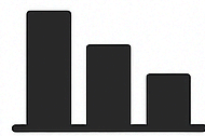

41.6%  
referred

**Morbidity:**  
54.8%

- Anemia 40.1 %
- Acute respiratory distress syndrome (ARDS) 8.8 %
- Acute renal failure

**Mortality:**  
4,4%

### CONCLUSION

High morbidity and mortality underscore the need for timely intervention
